Subscribers Galore : Exploring world's Top Youtube Channels

INTRODUCTION:

YouTube is an American online video sharing and social media platform headquartered in San Bruno, California, United States. Accessible worldwide, it was launched on February 14, 2005, by Steve Chen, Chad Hurley, and Jawed Karim. It is owned by Google and is the second most visited website in the world, after Google Search.

YouTube has more than 2.5 billion monthly users, who collectively watch more than one billion hours of videos every day. As of May 2019, videos were being uploaded to the platform at a rate of more than 500 hours of content per minute hours of content per minute.

What is Youtube?

Youtube is an online free video-sharing social media platform by Google. It was launched on February 14, 2005. The founder of youtube is Steve Chen, Chad hurley, and Javed Karim and the first-ever video shared on youtube was by Javed Karim. Youtube is a platform where people can upload videos and also can like, share, comment, follow and make their own channel, and subscribe also. This is one of the most used media and people can use it on their mobile phones and laptops. Youtube is the easiest way to upload videos online and watch videos with almost every type of content. We can share videos of any content like facts, cooking, daily vlogging, or totally study material. There is no limitation on the size or content of the video and also we can search for any type of video.

Comparison Table

Advantages

- Free of cost service
- Easy to use the service
- Good source to earn revenue
- Can connect with a wide audience
- Also used by students for educational videos

Disadvantages

- Inappropriate content also uploaded
- Bullying and defamation is easily done
- Little difficult to start earning
- Not easy to concentrate on a single topic
- Needs parental control set up

Data preparation

Data Visualization, Definition, Examples, And Learning Resources:

In our increasingly data-driven world, it's more important than ever to have accessible ways to view and understand data. After all, the demand for data skills in employees is steadily increasing each year. Employees and business owners at every level need to have an understanding of data and of its impact.

That's where data visualization comes in handy. With the goal of making data more accessible and understandable, data visualization in the form of dashboards is the go-to tool for many businesses to analyze and share information.

In the world of Big Data, data visualization tools and technologies are essential to analyze massive amounts of information and make data-driven decisions.

What are the advantages and disadvantages of data visualization

Something as simple as presenting data in graphic format may seem to have no downsides. But sometimes data can be misrepresented or misinterpreted when placed in the wrong style of data visualization. When choosing to create a data visualization, it's best to keep both the advantages and disadvantages in mind.

Advantages

Our culture is visual, including everything from art and advertisements to TV and movies. Data visualization is another form of visual art that grabs our interest and keeps our eyes on the message. When we see a chart, we quickly see trends and outliers. If we can see something, we internalize it quickly. It's storytelling with a purpose. If you've ever stared at a massive spreadsheet of data and couldn't see a trend, you know how much more effective a visualization can be.

Some other advantages of data visualization include:

- Easily sharing information.
- Interactively explore opportunities.
- Visualize patterns and relationships.

Disadvantages

While there are many advantages

Como of

Advantages and Disadvantages of Youtube

Advantages

- Free of cost
- A simple way to share
- Can earn money
- Can connect more audience

Disadvantages

- Vulgarity
- Bullying and defamation
- Earning money is difficult
- Too much distraction

Advantages

- Gives access to huge video content.
- Gives the opportunity to earn money through video.
- Facilitates to store video offline.
- Easy to use and share content with others.
- Can be utilized for study purposes.

Disadvantages

- Some content has got paid access.
- A huge advertisement takes place.
- Some content is adult rated but still, the under-aged children can access it.
- There is no limit to view videos on YouTube.
- Pirated videos still operate on YouTube.

Disadvantages,

While there are many advantages, some of the disadvantages may seem less obvious. For example, when viewing visualization with many different data points, it's easy to make an inaccurate assumption. Or sometimes the visualization is just designed wrong so that it's biased or confusing.

Some other disadvantages include:

- Biased or inaccurate information.
- Correlation doesn't always mean causation.
- Core messages can get lost in translation.

Important of data visualization

The importance of data visualization is simple: it helps people see, interact with, and better understand data. Whether simple or complex, the right visualization can bring everyone on the same page, regardless of their level of expertise.

It's hard to think of a professional industry that doesn't benefit from making data more understandable. Every STEM field benefits from understanding data-and so do fields in government, finance, marketing, history, consumer goods, service industries, education, sports, and so on.

While we'll always wax poetically about data visualization (you're on the Tableau website, after all) there are practical, real-life applications that are undeniable. And, since

visualization is so prolific, it's also one of the top most useful professional skills to develop.

Data visualization and big data

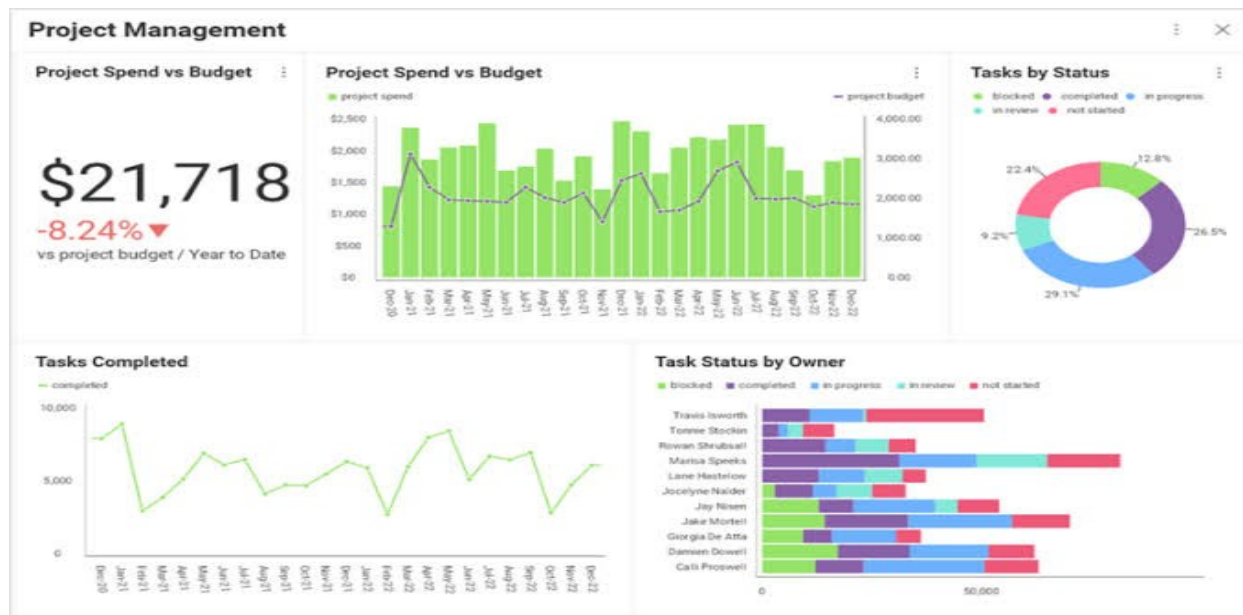

As the “age of big data ” kicks into high gear, visualization is an increasingly key tool to make sense of the trillions of rows of data generated every day. Data visualization helps to tell stories by curating data into a form easier to understand, highlighting the trends and outliers. A good visualization tells a story, removing the noise from data and highlighting useful information.

However, it's not simply as easy as just dressing up a graph to make it look better or slapping on the "info" part of an infographic. Effective data visualization is a delicate balancing act between form and function. The plainest graph could be too boring to catch any notice or it make tell a powerful point; the most stunning visualization could utterly fail at conveying the right message or it could speak

Different types of visualizations

When you think of data visualization, your first thought probably immediately goes to simple bar graphs or pie charts. While these may be an integral part of visualizing data and a common baseline for many data graphics, the right visualization must be paired with the right set of information. Simple graphs are only the tip of the iceberg. There's a whole

selection of visualization methods to present data in effective and interesting way

General types of visualizations:

Chart: Information presented in a tabular, graphical form with data displayed along two axes. Can be in the form of a graph, diagram, or map.

- **Table:**

A set of figures displayed in rows and columns. Learn more.

Graph:

A diagram of points, lines, segments, curves, or areas that represents certain variables in comparison to each other, usually along two axes at a right angle.

- **Geospatial:**

A visualization that shows data in map form using different shapes and colors to show the relationship between pieces of data and specific

locations.

- **Infographic:** A combination of visuals and words that represent data. Usually uses charts or diagrams about data visualization

About data visualizatoion

If you're feeling inspired or want to learn more, there are tons of resources to tap into. Data visualization and data journalism are full of enthusiastic practitioners eager to share their tips, tricks, theory, and more.

Blogs about data visualization

See our list of great data visualization blogs full of examples, inspiration, and educational resources. The experts who write books and teach classes about the theory behind data visualization also tend to keep blogs where they analyze the latest trends in the field and discuss new vizzes. Many will offer critiques on modern graphics or write tutorials to create effective visualizations. Others will collect many different data visualizations from around the web in order to highlight the most intriguing ones. Blogs are a great way to learn more about specific subsets of data visualization or to look for relatable inspiration from well-done projects.

Brand Ranking Visual

I'm trying to show a Brand Ranking visual so I can show how a brand compares to the top x brands across different categories- I need the ability to change the top x number of brands. So for example, in the attached, I want to show the top 5 brands within each sub-category compared to the brand selected. The problem is it's counting the top 5 regardless of sub-category.

I need 5 brands plus the brand selected to be displayed for each subcategory, not just the top 5 brands regardless of sub-category (which is what it is doing here).

Rank unique main topics for each brand based on number of Negative and Positive count. Not a normal rank but comparing between Negative and Positive Count Rank main topics based on that.

I have 4 columns Main Topics, Sentiment, Sentence and Brand. To get number of unique sentences for each sentiment i took out 2 clean branches after filtering statement for each (pos and neg). Took an aggregate and got the Negative count and Positive count.

Now have 3 columns, Main Topic, Neg/Pos Count and Brand. I ranked the Main topics based on Neg/Pos count Desc by partitioning Brand. Key Top 3 ranks.

For each brand I got 3 Main topics for each brand. Here i am stuck.

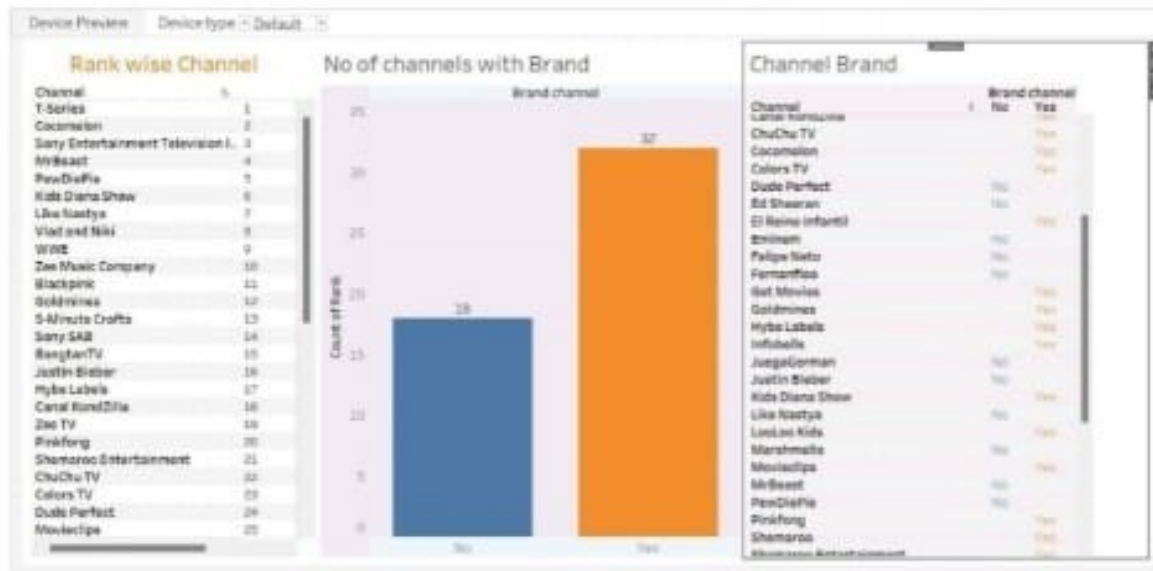

Dashboard:

Responsive and Design of Dashboard:

The responsiveness and design of a dashboard for Data-Driven insights on YouTube channels Analysis is crucial to ensure that the information is easily understandable and actionable. Key considerations for designing a responsive and effective dashboard include user- centered design, clear and concise information, interactivity, data-driven approach, accessibility, customization, and security. The goal is to create a dashboard

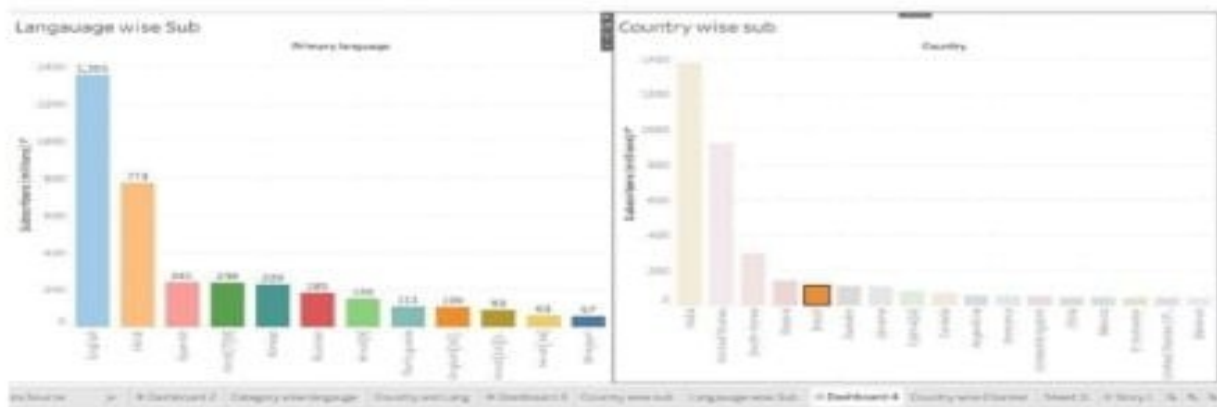

that is user-friendly, interactive, and data-driven, providing actionable insights.

A dashboard is a graphical user interface (GUI) that displays information and data in an organized, easy-to-read format. Dashboards are often used to provide real time monitoring and analysis of data, and are typically designed for a specific purpose or use case. Dashboards can be used in a variety of settings, such as business, finance, manufacturing, healthcare, and many other industries. They can be used to track key performance indicators (KPIs), monitor performance metrics, and display data in the form of charts, graphs, and tables

Stori

es

Applies to: Tableau Cloud, Tableau Desktop, Tableau Server

In Tableau, a story is a sequence of visualizations that work together to convey information. You can create stories to tell a data narrative, provide context, demonstrate how decisions relate to outcomes, or to simply make a compelling case.

A story is a sheet, so the methods you use to create, name, and manage worksheets and dashboards also apply to stories (for more details, see

Story point.

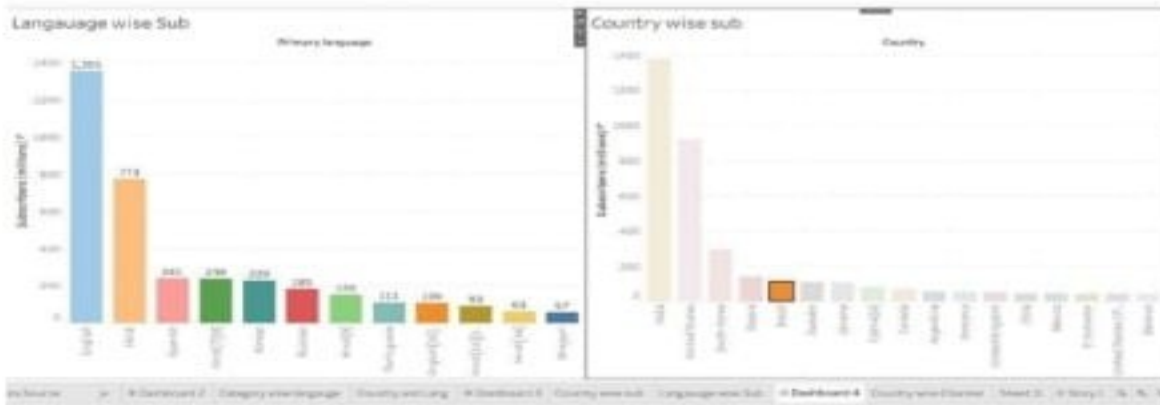

When you share a story—for example, by publishing a workbook to Tableau Public, Tableau Server, or Tableau Cloud—users can interact with the story to reveal new findings or ask new questions of the data

A data story is a way of presenting data and analysis in a narrative format, with the goal of making the information more engaging and easier to understand. A data story typically includes a clear introduction that sets the stage and explains the context for the data, a body that presents the data and analysis in a logical and systematic way, and a conclusion that summarizes the key findings and highlights their implications. Data stories can be told using a variety of mediums, such as reports, presentations, interactive visualizations, and videos.

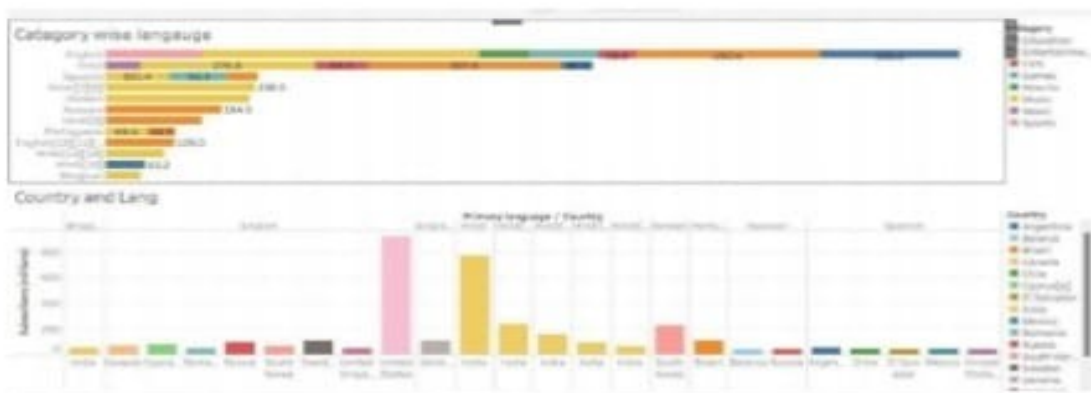

No of Scenes of Story

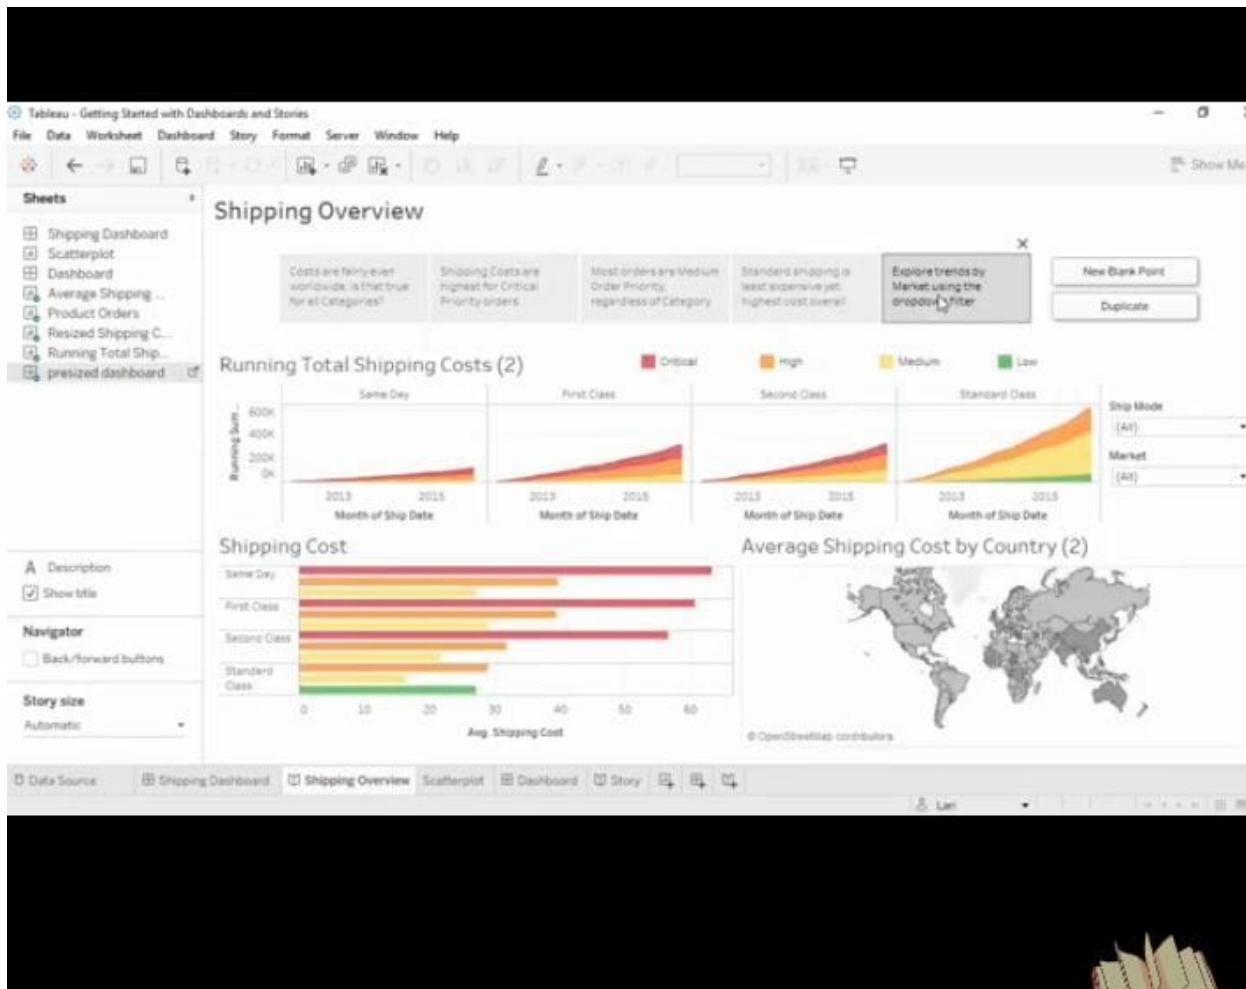

The number of scenes in a storyboard for Data-Driven insights on YouTube channels Analysis will depend on the complexity of the analysis and the specific insights that are trying to be conveyed. A storyboard is a visual representation of the data analysis process and it breaks down the analysis into a series of steps or scenes.

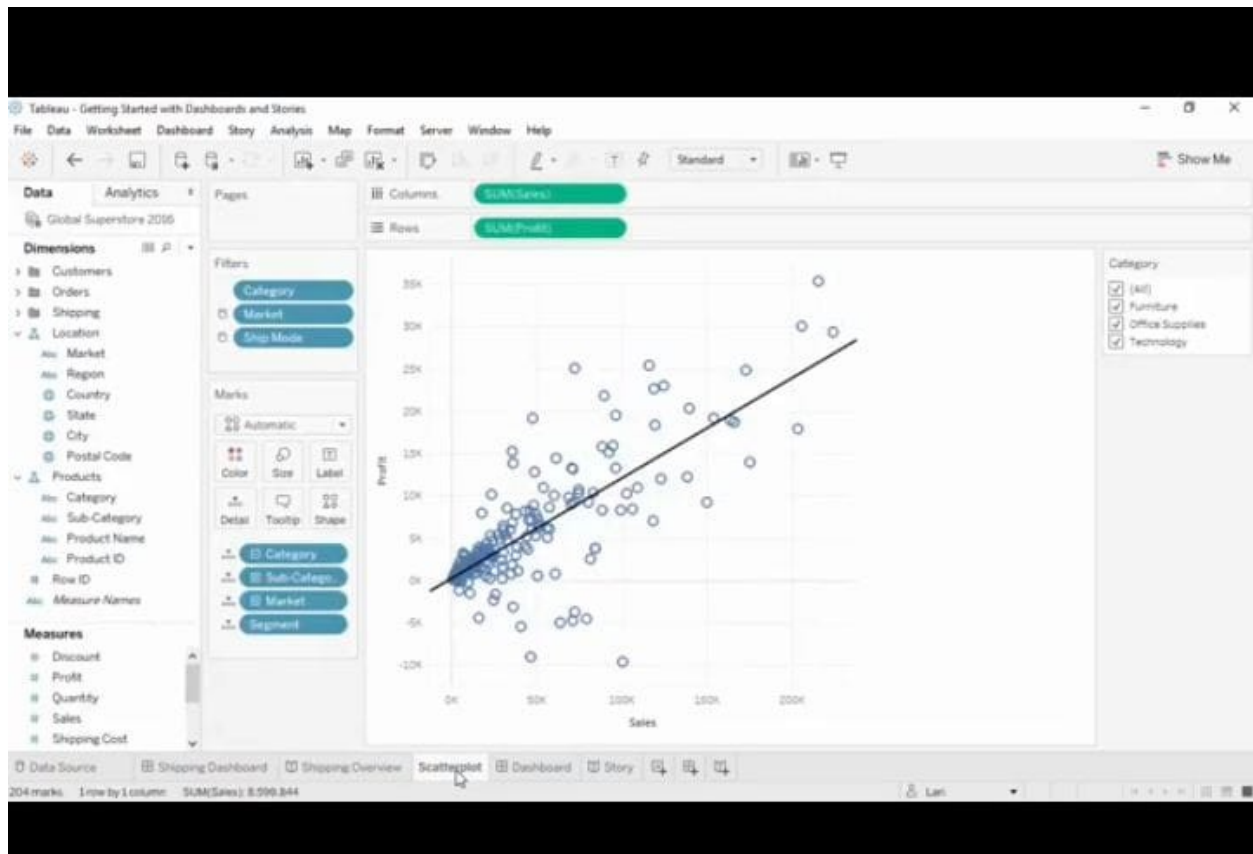

Performance testing

No of Visualizations/ Graphs

1. Table shows Rank wish channel.
2. Bar graph shows the number of channels with Brand.
3. Table shows Brand
4. Heatmap shows channel name with subscribers
5. Circle shows a number of channels with a particular language.
6. Bar graph shows category wise language

7. Bar graph shows the Country with its primary language and number of subscribers.

8. Bar graph shows language wise subscribers.

9. World map showing Country wise channel.

Milestone

Publishing

Publishing helps as to track and monitor key performance metrics, to communicate results and progress. Help a publisher stay informed, make better decisions, and communicate their performance to others.

Publishing dashboard and reports to tableau public

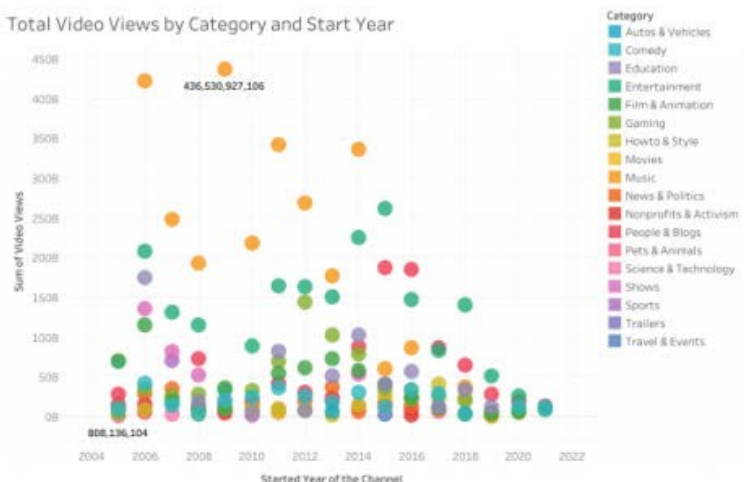

Step 1 Go to data Source and Select Extract so that .hyper extension files are created and save it at your desktop.

YouTube Demographics

Once the upload is complete, a browser window will automatically open, displaying your published workbook on Tableau Public. Review the workbook to ensure that everything appears as expected.

So in Similar way we can also publish Story to tableau public.

Milestone 9: Project Demonstration & Documentation

Below mentioned deliverables to be submitted along with other deliverables.

Record explanation Video for project end to end solution
Project Documentation-Step by step project development procedure
Create a document as per the template provided.

Conclusion

It was wonderful and learning experience for me while working on this project.

This prroject took me through various aspects of project and taught me aboutit research and findings . It also gave me real insight into this project topic. This project was full of thrill and joy. I learnt alot about problem solving and how to deal with challanges.

Thankyou for giving me this project I enjoyed hit of doing it.
